 3. If the medical records are silent as to whether or not plaintiff had a myocardial infarction, new pathological Q waves in two or more contiguous leads; or
 4. If the medical records are silent as to whether or not plaintiff had a myocardial infarction, (i) Signs and symptoms described in medical records of a heart attack (including but not limited to chest pain, pressure, tightness or discomfort, pain or discomfort in the upper areas of the body including but not limited to one or both arms, the back, neck, jaw or stomach, or shoulders; shortness of breath, weakness, dizziness, cold sweat, or excessive sweating, nausea, weakness, fatigue, loss of consciousness or posture, lightheadedness, feeling of faintness, heart-burn or indigestion sensations, feelings of restlessness or anxiousness, a sense of impending doom, disorientation, lips, hands or feet turning slightly blue, abnormal heart rhythms (arrhythmias), or loss of consciousness, cardiac arrest, blood pressure fluctuations or drops requiring medical intervention) or new ischemic ST-T wave changes on an electrocardiogram in two or more contiguous leads; AND (ii) a rise and fall of cardiac enzymes that includes a rise in serum creatine kinase MB (CK-MB) to greater than two times the upper limit of normal (based on the individual's laboratory's normal range) or a rise in serum cardiac

(In the event that the laboratory records do not reflect the normal diagnostic range for troponin that is utilized by that specific laboratory, a rise in the troponin to greater than 1.5 ng/ml shall be deemed to indicate a myocardial infarction.)

5. An event is not a myocardial infarction under definition Nos. 3 or 4 above, if myocardial infarction is ruled out as a diagnosis in the discharge summary or by an in-house cardiology consult at the time of the event, or the final diagnosis is angina or unstable angina.
